DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/28/2007 has been entered.

Response to Amendment

2. Applicant's arguments with respect to claims 23-32 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 23-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent No. 6,782,253 Shteyn et al. (Shteyn) and further in view of US Patent No. 5,796,351 (Yabuki) and US Patent No. 6,487,180 Borgstahl (Borgstahl).

Art Unit: 2617

Considering claim 23, Shteyn teaches a system for promoting exhibits at a shopping mall (figure 1, col. 6 lines 37-57 and col. 7 lines 33-54), comprising: a networkconnected server storing an exhibit profile for individual ones of a plurality of the exhibits (col. 8 lines 12-41); a first computerized communication device usable by a first person potentially interested in one or more of the exhibits at the shopping mall (mobile device 108 – figure 1, col. 37-57); and inherently teaches a second computerized communication device usable by an agent for one of the exhibits (col. 8 lines 42-58, where Shteyn discloses providing a pointer to connect to the agent with SMS or telephone number, therefore, the agent has to have a communication device); wherein the first person registers a seeker profile with the server (Content 202 - figure 2, col. 7 liens 13-32, where the content includes the user's location, activity and interests), the server compare the seeker profile with stored exhibit profiles and finds one or more matches (filter matching process 204 – figure 2, col. 7 lines 55-61 and col. 8 lines 12-41), and provides a communication address for the second communication device to the first person to contact the agent for the associated exhibit (col. 8 lines 42-58). However, Shteyn does not teach providing the information responsive to finding the matched profile.

In an analogous art, Yabuki teaches providing the information responsive to finding the matched profile (col. 4 lines 39-58).

It would have been obvious for one of ordinary skill in the art at the time the invention was made to modify Shteyn's system to include providing the information

responsive to finding the matched profile, as taught by Yabuki, for the advantage of obtaining information about a specific exhibition object.

However, the combined system of Shteyn and Yabuki does not teach that the exhibit is at a trade show.

In an analogous art, Borgstahl teaches that the exhibit is at a trade show (col. 14 lines 30-44).

It would have been obvious for one of ordinary skill in the art at the time the invention was made to modify the combined system Shteyn and Yabuki to include that the exhibit is at a trade show, as taught by Borgstahl, for the advantage of providing information that is tailored to the user (col. 14 lines 30-44).

Considering claim 28, Shteyn teaches a method for promoting exhibits at a shopping mall (figure 1, col. 6 lines 37-57 and col. 7 lines 33-54), comprising: (a) storing an exhibit profile for individual ones of a plurality of the exhibits on a network-connected server (col. 8 lines 12-41); (b) registering <u>at the server</u> seeker profile <u>of</u> a first person having a first computerized communication device (col. 7 lines 13-54); (c) comparing seeker profiles with exhibit profiles by the server and finding a match between the seeker profile and an individual one of the exhibit profiles (filter matching process 204 – figure 2, col. 7 lines 55-61 and col. 8 lines 12-41); and (d) passing a communication address to the first person by the server for a second computerized communication device usable by an agent for the exhibit matched to the seeker profile (col. 8 lines 42-

Art Unit: 2617

58). However, Shteyn does not teach providing the information responsive to finding the

Page 5

matched profile.

In an analogous art, Yabuki teaches providing the information responsive to finding the matched profile (col. 4 lines 39-58).

It would have been obvious for one of ordinary skill in the art at the time the invention was made to modify Shteyn's system to include providing the information responsive to finding the matched profile, as taught by Yabuki, for the advantage of obtaining information about a specific exhibition object.

However, Shteyn does not teach that the exhibit is at a trade show.

In an analogous art, Borgstahl teaches that the exhibit is at a trade show (col. 14 lines 30-44).

It would have been obvious for one of ordinary skill in the art at the time the invention was made to modify Shteyn's system to include that the exhibit is at a trade show, as taught by Borgstahl, for the advantage of providing information that is tailored to the user (col. 14 lines 30-44).

Considering claims 24 and 29, Shteyn further teaches one or both of the computerized communication devices are cellular telephones (mobile device 108 – figure 1, col. 6 lines 37-57).

Considering claims 25 and 30, Shteyn further teaches the network is the Internet network (col. 7 lines 13-32).

Considering claims 26 and 31, Shteyn further teaches the first computerized communication device is an Internet-capable device (col. 7 line 62 – col. 8 line 11), and first person registers the seeker profile using the first computerized communication device (col. 7 lines 33-54).

Considering claims 27 and 32, Shteyn further teaches the first communication device is an Internet-capable cellular telephone (col. 7 line 62 – col. 8 line 11).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary Au whose telephone number is (571) 272-2822. The examiner can normally be reached on 8am-5pm Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lester Kincaid can be reached on (571) 272-7922. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
